PROJECT EXPERIENCE

Quizzical Trivia App – Determine user’s knowledge on some questions

- Using the Open Trivia Database API, making a call to pull trivial questions.
- Using Html, CSS, JavaScript, React to style, display and create logics.
- The app test users knowledge on variety of question and then determine their score after they submits

Static Job Listing App – Filter out jobs through keyword clicked by user

- Pulled data from a local database.
- Made use of Html, CSS, JavaScript and React in creating, styling and handling the logics.
- The app allows users to filter out jobs based on the keyword matching the job profile they are interested in.

Time Tracking Dashboard – An individual activity tracker dashboard

- Fetched the data from a local database using the Asynchronous JavaScript.
- Made use of Html, CSS, and JavaScript in creating, styling and handling the logics.
- The tracking dashboard enables user to navigate to see an individual’s daily, weekly and monthly data activity.

RELEVANT TECHNICAL EXPERIENCE

Open Source Contributor, Github

- Communicate on improving and debugging codes with fellow contributor(s) on projects.
- Access other community member insights and assist in adding new and valuable functionalities to different projects.
